Directions for use:

Start use 1st week into flower
Ready to use mixture
First week of flower through 2nd week of flower
 Mix 1/16 of a teaspoon (0.125 grams) per gallon. Water into the root zone 1 to 2 times per week. Check pH
3rd week of flower through 5th week of flower
 Mix 1/4 of a teaspoon (0.5 grams) per gallon. Water into the root zone 2 to 3 times per week. Check pH
6th week of flower through 8th week of flower
 Mix 1/2 of a teaspoon (1 gram) per gallon. Water into the root zone 3 to 4 times per week. Check pH
Foliar Feeding: Use 1/4 of the above dose solution.
Test on a single plant prior to use.
Discontinue use after the 8th week of flower
Above is an approximate feeding schedule some varieties may require more or less G-Buds to achieve desired results.
Concentrate mixture:
 Mix 6 to 10 teaspoons per gallon and dose at 10 to 25 ml per gallon.
For use in row crops:
 Mixing and Handling Instructions:
 Apply in a minimum of 25 gallons water per acre for ground spray equipment or 5 gallons water per acre for aerial application. G-Buds may also be applied via drip or sprinkler fertigation. Put 1/3 to 2/3 of total required water volume in tank. Add adjuvants, fertilizers, and pesticides if desired and agitate until thoroughly mixed. Add recommended amount of this product and agitate until thoroughly mixed. Fill tank with remainder of water.
Caution: Check chemical mixture compatibility using a jar test prior to application.
 12 oz to 64 oz per acre mixed in 25 gallons of water minimum. Optimum rate of application will vary depending on soil properties such as pH, organic matter content, texture, weather conditions, time of year & general crop health. For best results, follow soil test or plant analysis recommendation
